DETAILED ACTION

Information Disclosure Statement

1. The references listed in the information disclosure statements submitted on 12/23/03 has been considered by the examiner (see attached PTO-1449).

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following **title** is suggested: "An improved method and apparatus for presenting assistance data in a communication (or video) conference system".

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The

Art Unit: 2618

disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The abstract is too long and fails to clearly point out the improvement subject matter in a video conference system. Accordingly, a new abstract is suggested below

New Abstract

The present invention provides a communication assistance process that is performed by a communication assistance device connected to a plurality of user terminals via a network. During a communication (or video) conference call, when assistance data associated with a topic in the conference is provided to a plurality of user terminals in the form of a voice data, the communication assistance process adjusts the sound volume of voice data in the assistance data if it was determined that voice data is included in the communication data received from the plurality of user terminals, and if voice data is also included in the assistance data, the assistance data that includes sound volume adjusted voice data is then provided to the plurality of user terminals. Accordingly, the communication assistance process allows communications in a conference system to proceed smoothly.

Claim Objections

5. Claims 1-14 are objected to as for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2618

Regarding claims 1, 12-14, a preamble for distinctly pointing out the subject matter should be included for the claims. For example, "A communication assistance process performed by a communication assistance device connected to a plurality of user terminals **in a conference system**, the communication assistance process comprising the steps of : claimed limitations".

Appropriate correction is required.

Allowable Subject Matter

6. Claims 1-14 would be allowable if rewritten or amended to overcome the objection(s) set forth in this Office action.

7. The following is a statement of reasons for the indication of allowable subject matter:

This instant application directs to a non-obvious feature improvement over the cited prior art for presenting assistance data to a plurality of user terminals in a conference system. The non-obvious feature comprises the steps of determining whether or not voice data is included in the received communication data and determining whether or not voice data is included in the assistance data, adjusting the sound volume of voice data in the assistance data if it was determined that voice data is included in the communication data received from the plurality of user terminals, and if voice data is also included in the assistance data, the assistance data that includes sound volume adjusted voice data is then provided to the plurality of user terminals. This patentability is included in independent claims 1, 12-14.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
